AZURE TASK 1

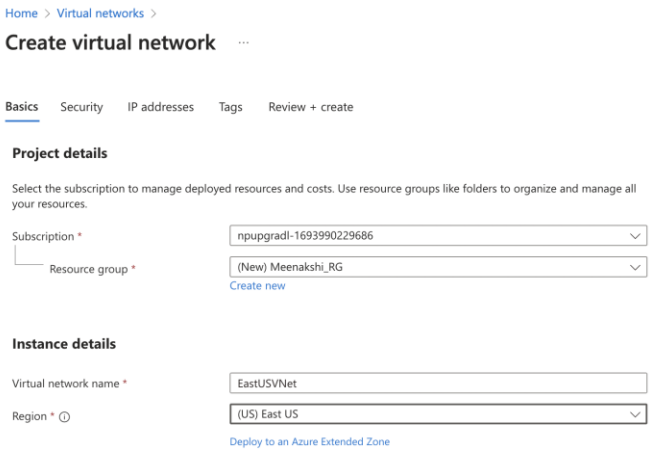

Name: Meenakshi

Batch: 7943

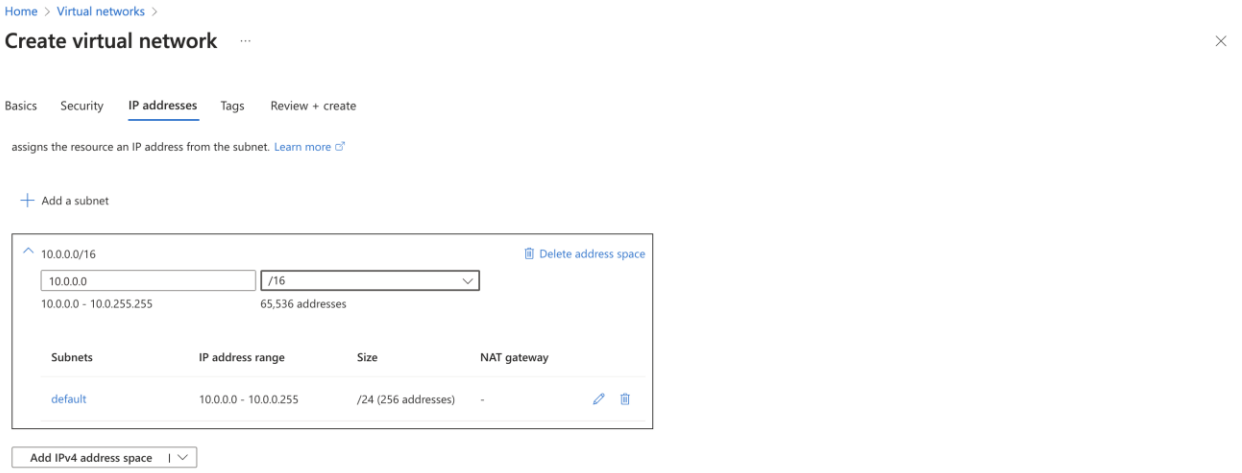

Course Assignment

Task I - Setup Virtual Networks

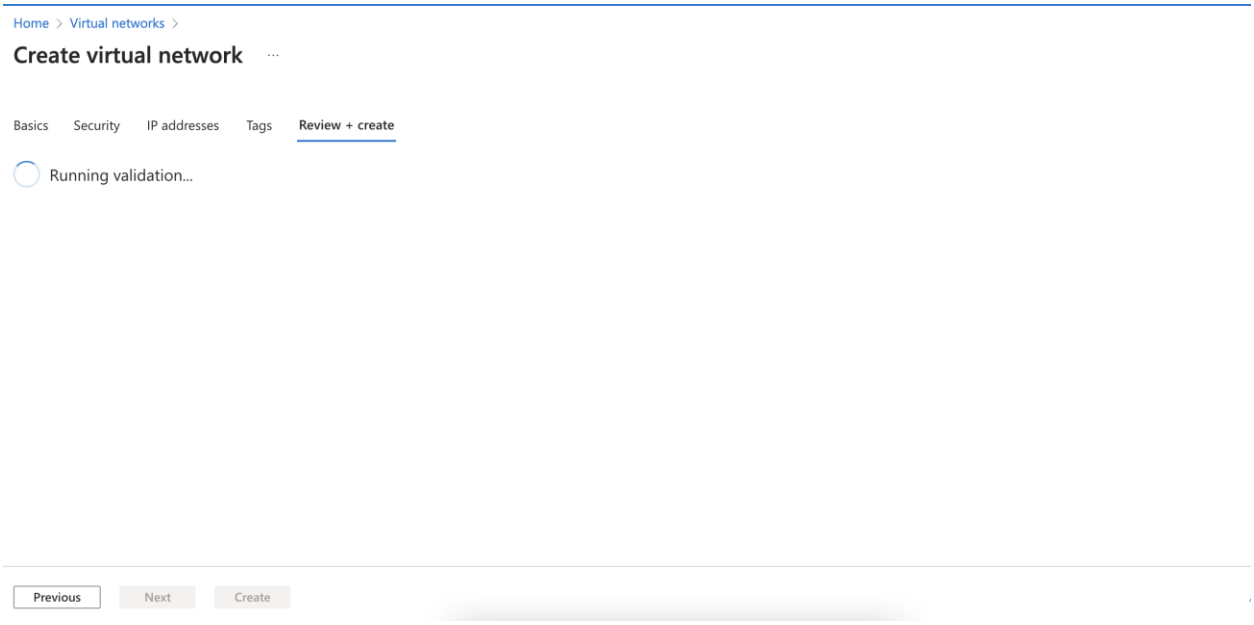

1. **Sign in** to the Azure portal.
2. In the left-hand sidebar, **click on "Create a resource"**.
3. In the "Search the Marketplace" box, **type "Virtual Network"** and select **Virtual Network** from the list.
4. In the "Virtual Network" pane, click on **Create**.
5. **Choose a subscription** (if you have more than one) and select **Resource Group** (or create a new one).
6. **Name the Virtual Network**: Enter "EastUS VNet" as the name.
7. **Region**: Select **East US** from the dropdown list.

8. Click **Next** (on the tabs at the top) until you reach the “IP Addresses” tab.
9. In the **Address space** field, enter an address space such as 10.0.0.0/16 (you can adjust this to your needs).

10. Click **Next** to go through the remaining tabs and click **Create** once done.

1.2 Create EastUS2 VNet

1. **Repeat steps 1.1** for creating a second virtual network, but:
    a. Name it **EastUS2 VNet**.
    b. Choose **East US 2** as the region.
    c. Use a different address space like 10.1.0.0/16.

Step 2: Establish VNet-to-VNet Peering

2.1 VNet Peering from EastUS to EastUS2

1. In the **Azure portal**, go to **Virtual Networks**.
2. Click on **EastUS VNet**.
3. In the left sidebar of the VNet page, select **Peerings** under the "Settings" section.

4. Click **+ Add** to create a new peering.

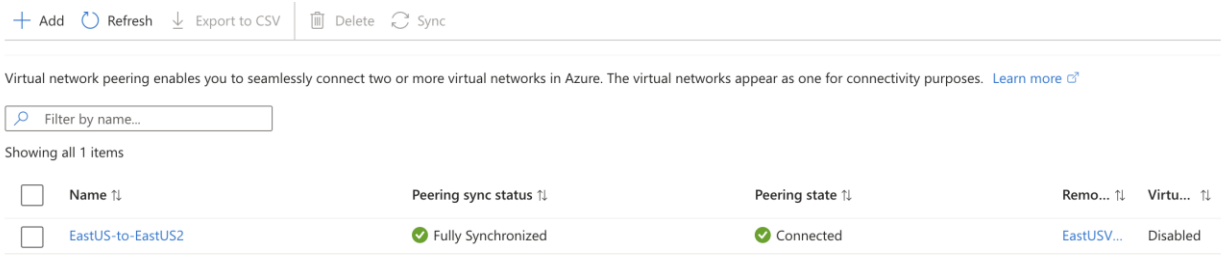

5. **Name the peering**: Enter a name like "EastUS-to-EastUS2".
6. Under **Peering link name**, enter a name like “EastUS-to-EastUS2”.
7. For the **Peering link direction**, choose:
    a. **Allow traffic to flow from EastUS VNet to EastUS2 VNet** (Outward).
    b. **Allow traffic to flow from EastUS2 VNet to EastUS VNet** (Inward).
8. Under **Traffic forwarding**, select **Allow traffic between virtual networks**.
9. Ensure **Use remote gateways** is checked if needed, and click **Create**.

2.2 VNet Peering from EastUS2 to EastUS

1. Now go to the **EastUS2 VNet** page.
2. In the left sidebar, select **Peerings** again.
3. Click **+ Add** to create the reverse peering.
4. **Name the peering**: Enter a name like "EastUS2-to-EastUS".
5. Choose the opposite direction of traffic flow, allowing communication between both VNets.
6. Complete the peering creation and click **Create**.

Step 2: Create VMs for Testing

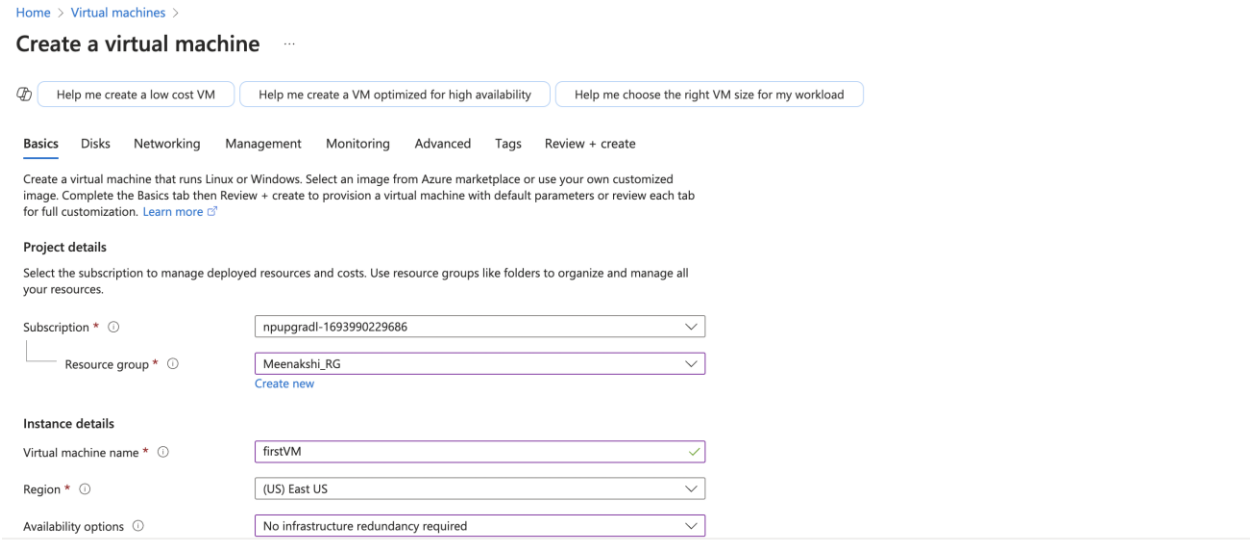

(Optional step for testing the communication between VNets)

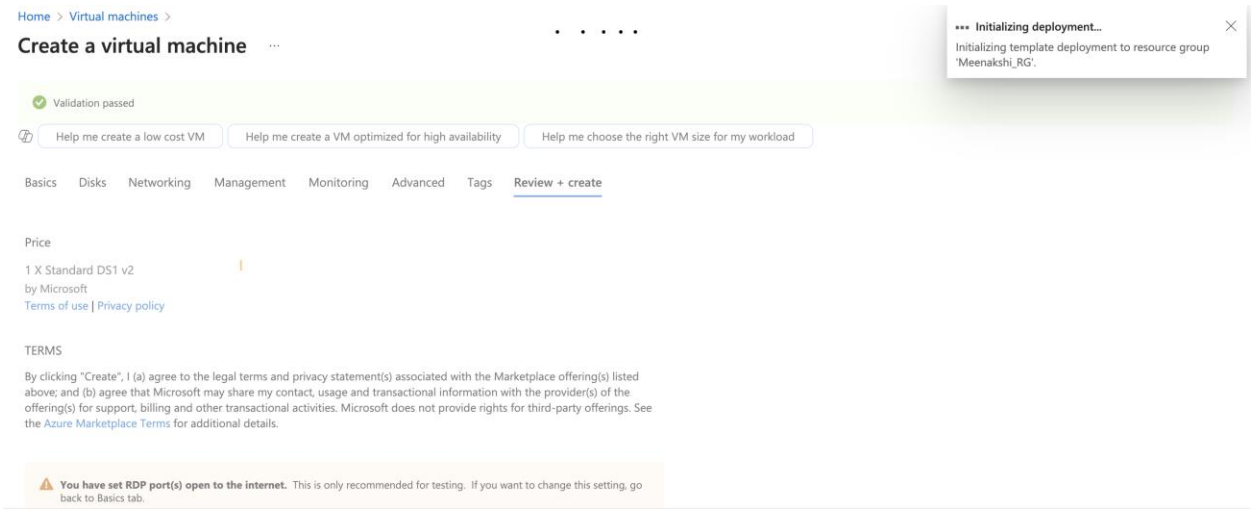

2.1 Create Web Servers (w1, w2) in EastUS VNet

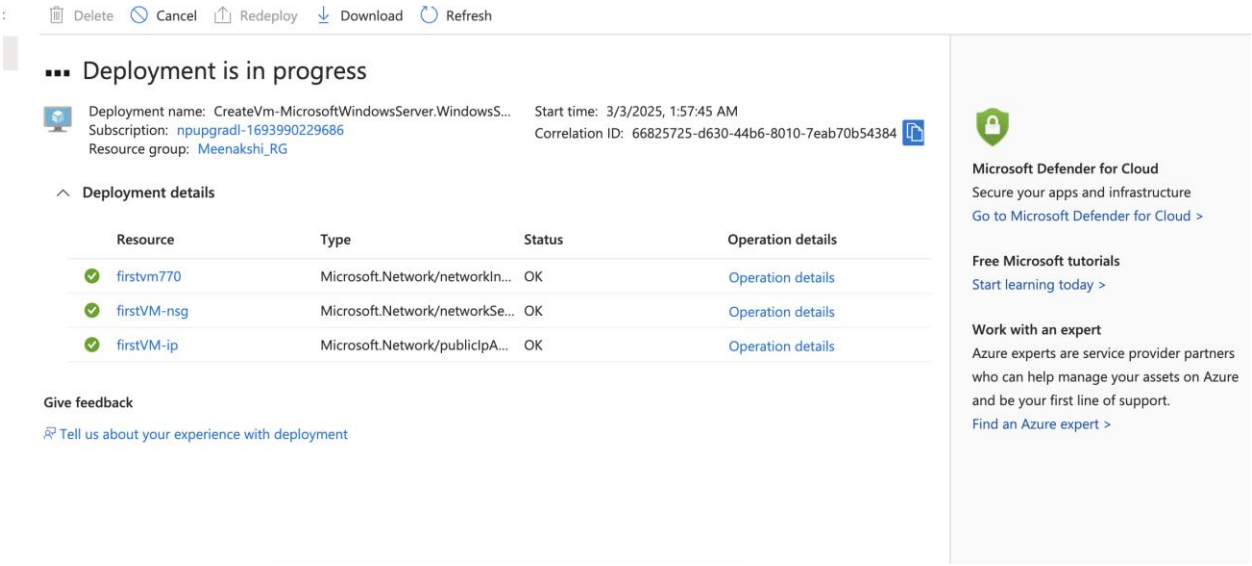

1. From the portal's left sidebar, click on **Create a resource**.
2. In the "Search the Marketplace" box, type **Windows Server 2022** (or any other image you wish) and select it.
3. Choose **Create**.
4. Under **Resource Group**, select the resource group you used for the VNet.
5. **Name** the VM (e.g., w1 and w2 for Web Servers).
6. Choose the **East US region** and select **EastUS VNet** under the Networking section.
7. Configure other settings (like size, username, password) as needed.
8. **Review + Create** and click **Create**.

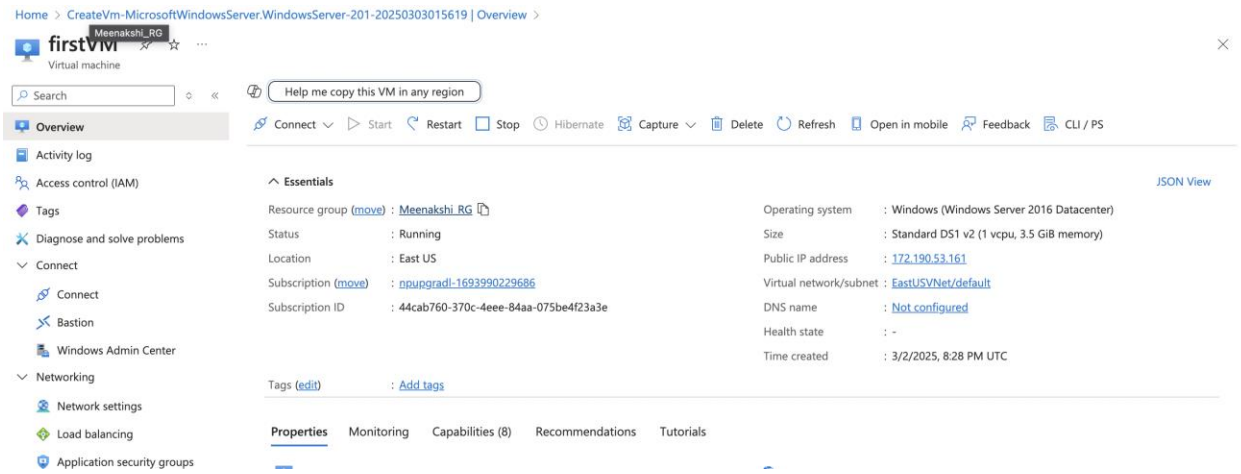

2.2 Create WS11 Server in EastUS2 VNet

1. Repeat the VM creation steps above, but select the **East US 2 region** and **EastUS2 VNet**.

Step 3: Test Communication Between VNets

1. From the **w1** or **w2** VM in EastUS, use **ping** or **tracert** to test connectivity to the **WS11** server in EastUS2.
2. Ensure that the IP addresses in both VNets are reachable and that communication works smoothly.

Able to ping second VM

AZURE TASK 2

Name: Meenakshi

Batch: 7943

Course Assignment

Task II - Deploy Virtual Machines

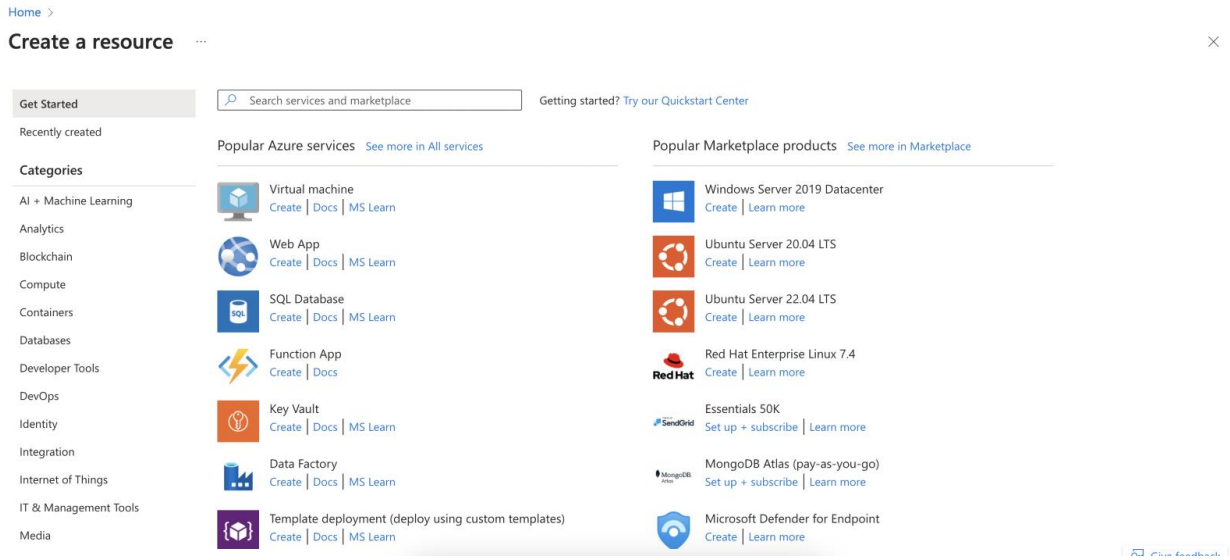

Step 1: Deploy Web Servers (w1, w2) in EastUS VNet

We will create **two VMs** (w1 and w2), place them in an **Availability Set**, configure a **Load Balancer**, and set up an **RD Gateway**.

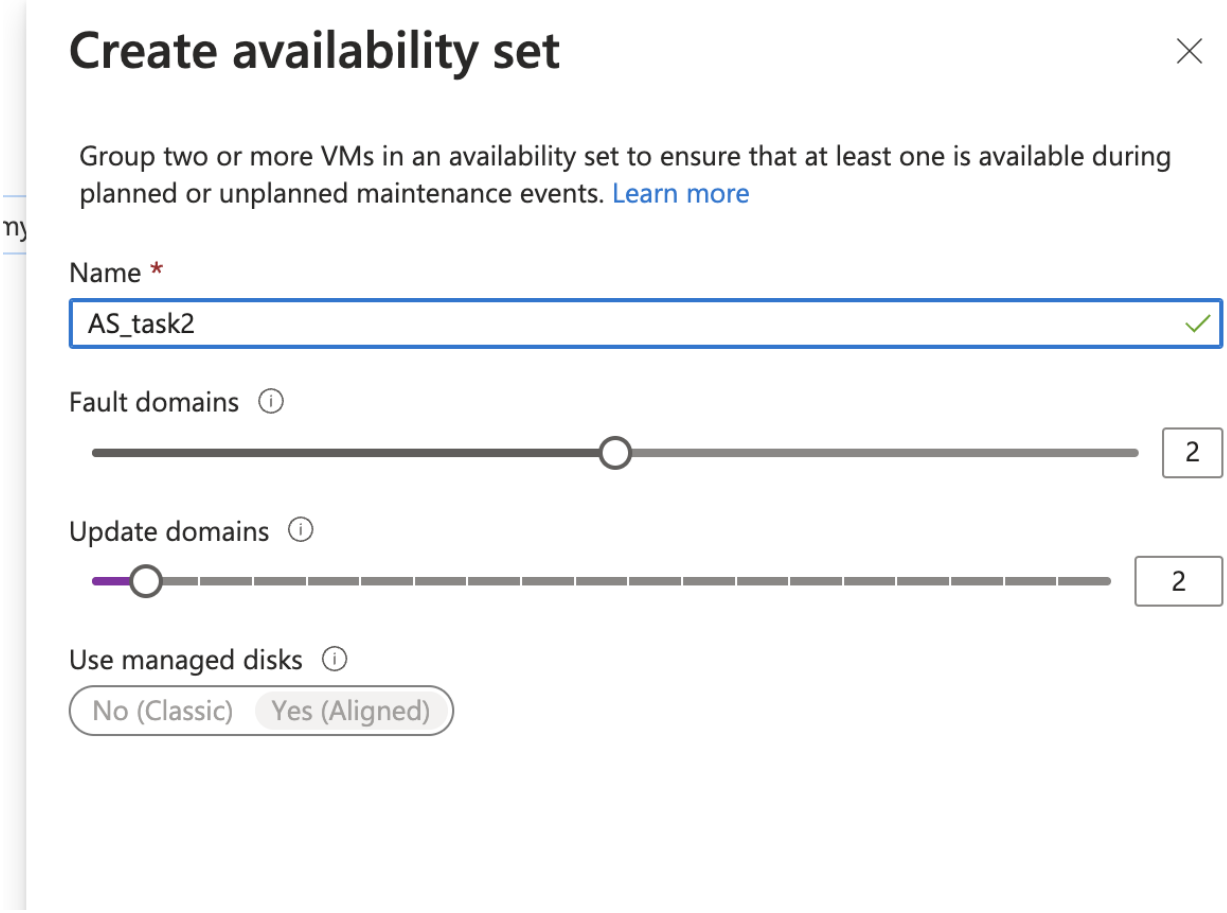

1.2 Deploy Web Server VMs (w1, w2)

Create VM w1

1. In the **Azure portal**, click **Create a resource**.

2. Select **Virtual Machine**.
3. Choose your **Subscription** and **Resource Group**.
4. **VM Name:** Enter w1.
5. **Region:** Select **East US**.
6. **Availability options:** Choose **Availability set** and select **WebServer-AvailabilitySet**.

7. Choose an **image** (e.g., Windows Server 2022).
8. Set **Size** based on your needs (e.g., Standard B2s).
9. **Administrator Account:** Set a username and password.
10. Click **Next: Disks >**, then choose **Premium SSD** (recommended).
11. Click **Next: Networking >**, then:
    a. **Virtual Network:** Select **EastUS VNet**.
    b. **Subnet:** Select an appropriate subnet.
    c. **Public IP:** Create or select an IP (optional).
    d. **NIC Network Security Group:** Select **None** (we'll configure later).
12. Click **Review + Create**, then **Create**.

Validation passed

Help me create a low cost VM | Help me create a VM optimized for high availability | Help me choose the right VM size for m

Basics

Subscription	npupgradl-1693990229686

Use managed disks	Yes
Delete OS disk with VM	Enabled
Ephemeral OS disk	No

Networking

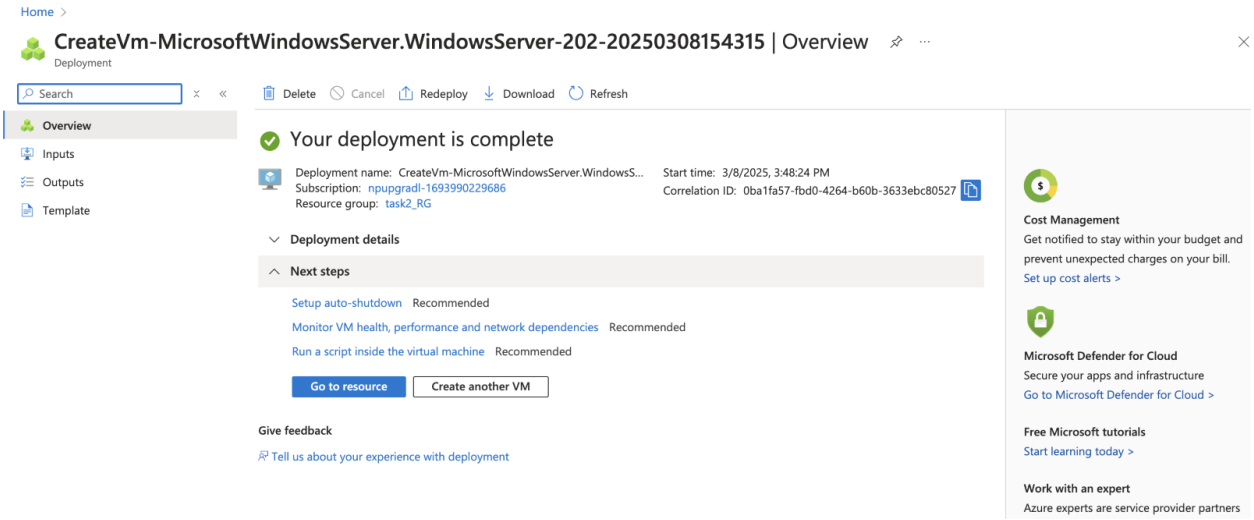

Virtual network	(new) w1-vnet
Subnet	(new) default (10.0.0.0/24)

Create VM w2

1. **Repeat the above steps**, but name the VM **w2** and place it in the same **Availability Set** .

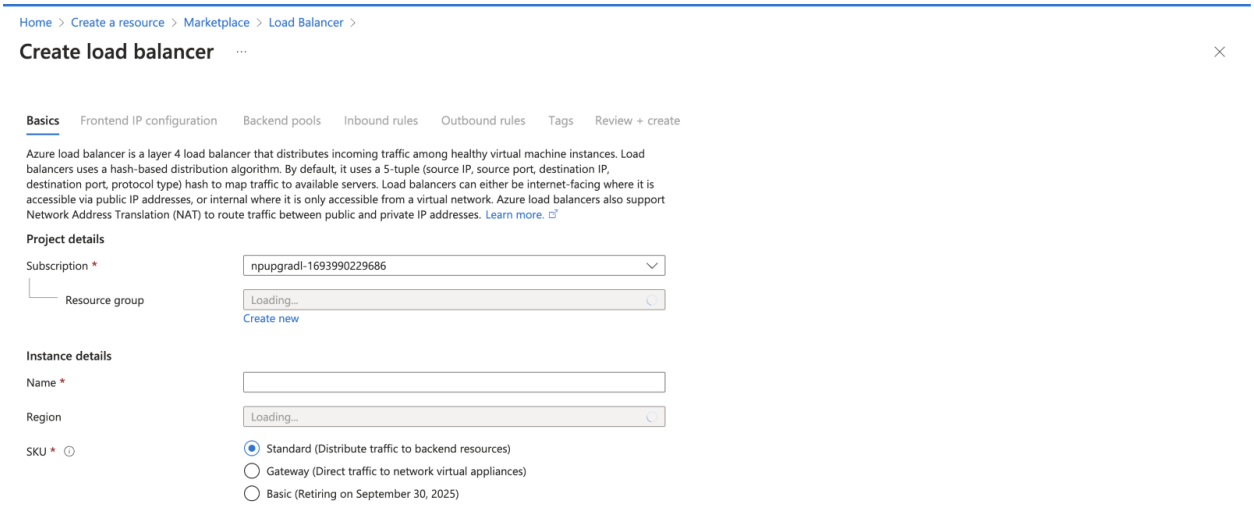

Step 2: Configure Azure Load Balancer for Web Servers

We will create an **Azure Load Balancer** to distribute traffic between w1 and w2.

2.1 Create the Load Balancer

1. In the **Azure portal**, search for **Load Balancers** and click **+ Create**.

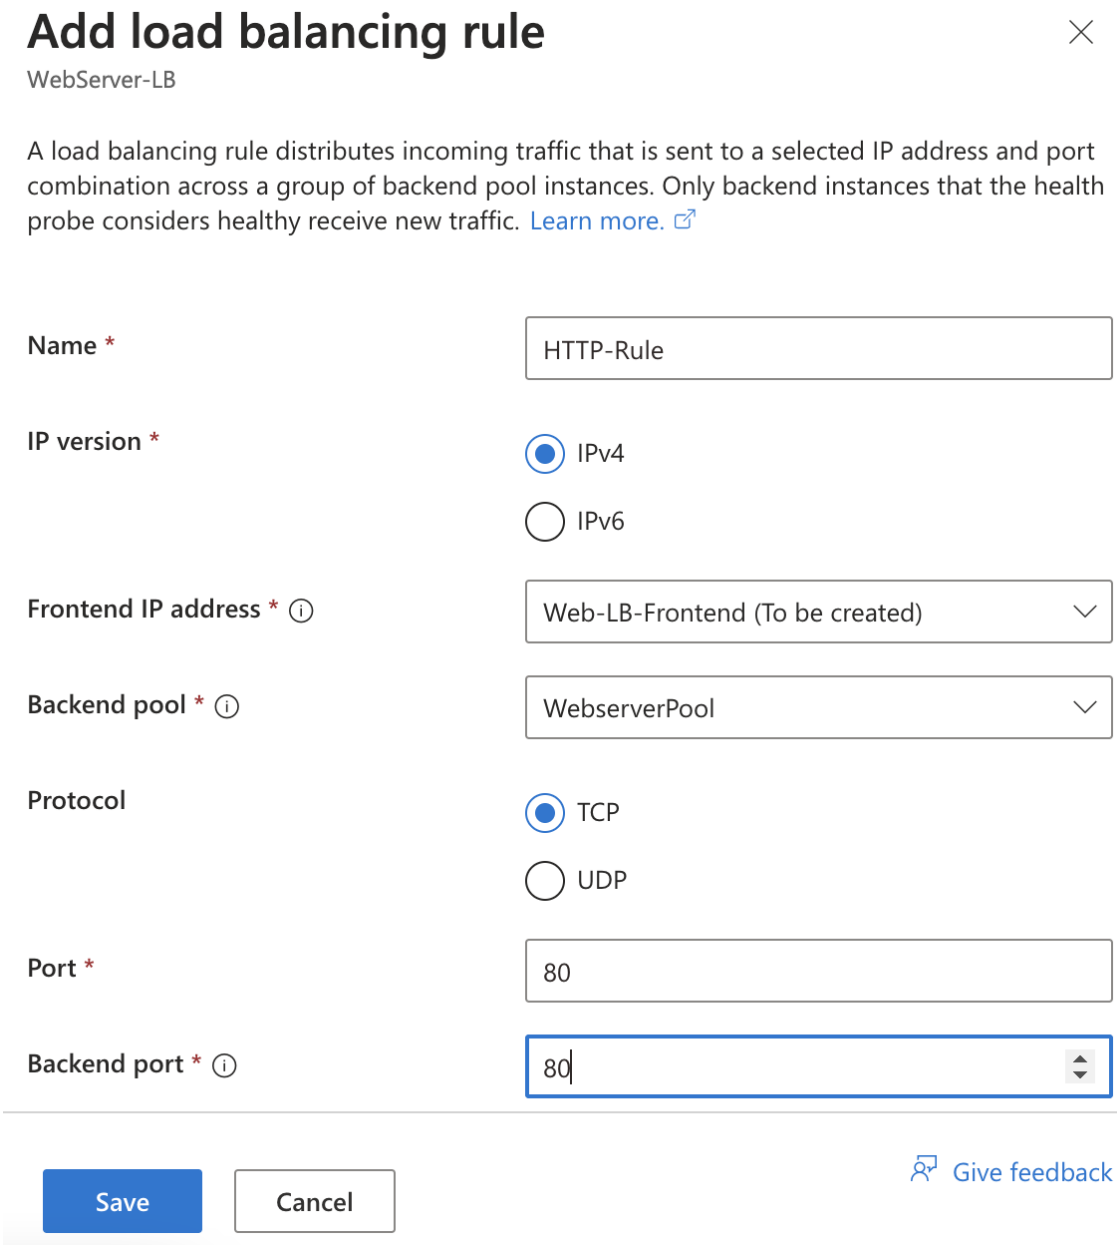

2. Choose your **Subscription** and **Resource Group**.
3. Name it **WebServer-LB**.
4. **Region:** Select **East US**.
5. **Type:** Public.
6. Click **Next: Frontend IP Configuration >**.
7. Click **+ Add a frontend IP configuration**:
    a. **Name:** Web-LB-Frontend
    b. **Public IP Address:** Create a new public IP.

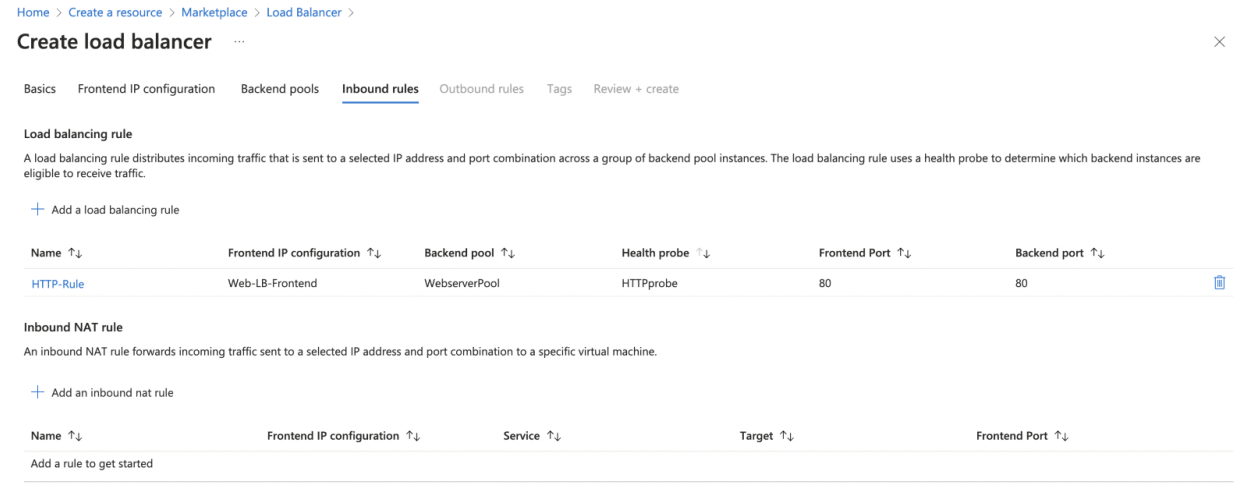

8. Click **Next: Backend Pool >**, then:
    a. Click **+ Add a backend pool**.
    b. **Name:** WebServers-Pool
    c. **Select Virtual Network:** EastUS VNet
    d. **Select Virtual Machines:** Add w1 and w2.

9. Click **Next: Health Probes >**, then:
    a. Click **+ Add a health probe**.
    b. **Name:** HTTP-Probe
    c. **Protocol:** HTTP
    d. **Port:** 80
    e. Click **OK**.

10. Click **Next: Load Balancing Rules >**, then:
    a. Click **+ Add a rule**.

b. **Name:** HTTP-Rule
c. **Frontend IP:** Web-LB-Frontend
d. **Protocol:** TCP
e. **Port:** 80
f. **Backend Pool:** WebServers-Pool
g. **Health Probe:** HTTP-Probe

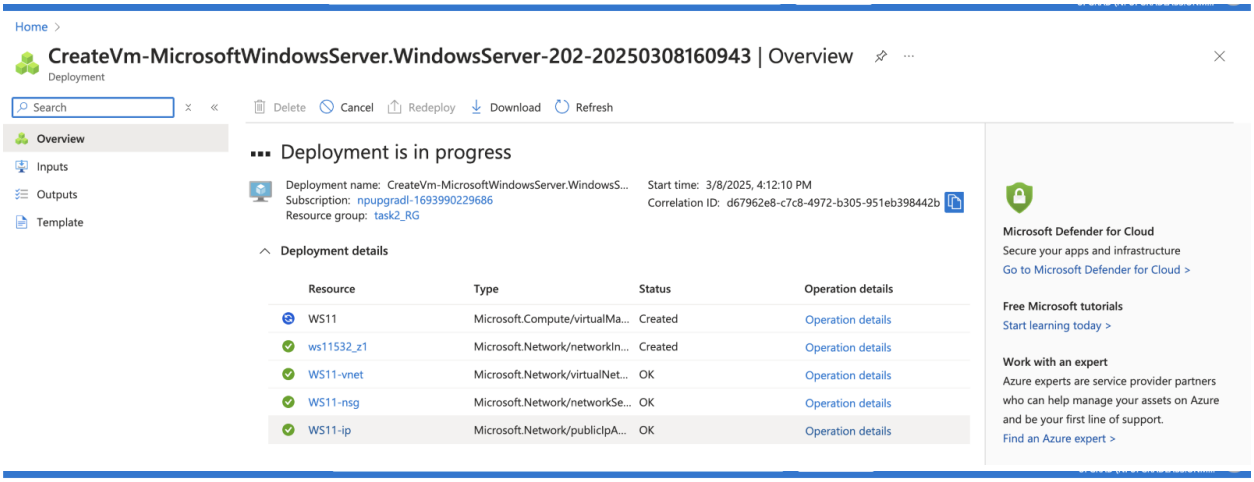

11. Click **Review + Create**, then **Create**.

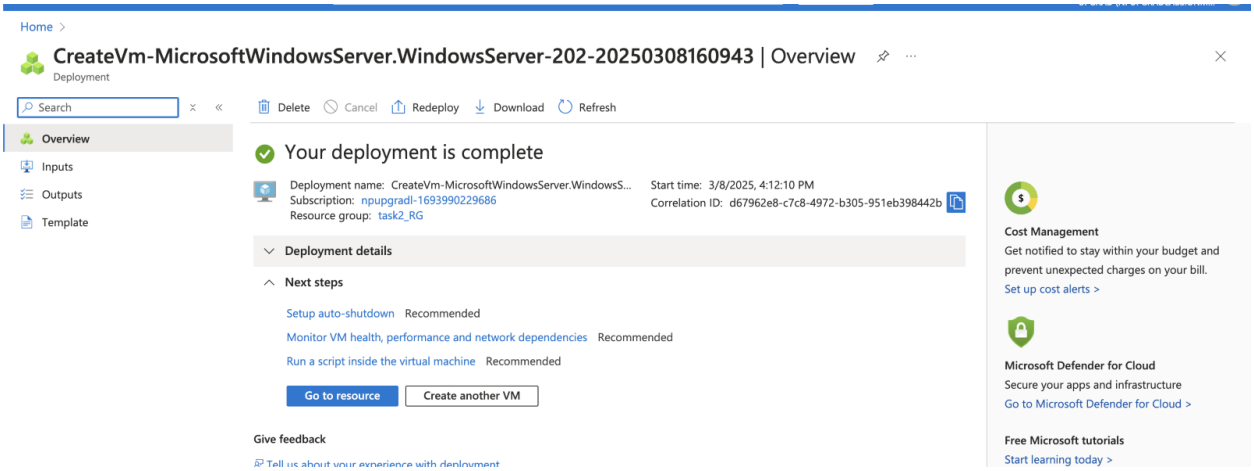

Step 3: Set Up Remote Desktop Gateway (RD Gateway)

1. Deploy a **Windows Server VM** in the **EastUS VNet**.
2. **Install RD Gateway**:
    a. Open **Server Manager** → **Add Roles and Features**.
    b. Select **Remote Desktop Services** and install **RD Gateway**.
3. Configure **RD Gateway** to allow admins to access the web servers securely.

Step 4: Deploy Backend Server (WS11) in EastUS2 VNet

1. In the **Azure portal**, go to **Create a resource** → **Virtual Machine**.
2. Choose:
    a. **VM Name:** WS11
    b. **Region:** East US 2
    c. **Virtual Network:** EastUS2 VNet
    d. **Subnet:** Choose an appropriate subnet.
3. Complete the rest of the VM setup like before.
4. Click **Review + Create**, then **Create**.

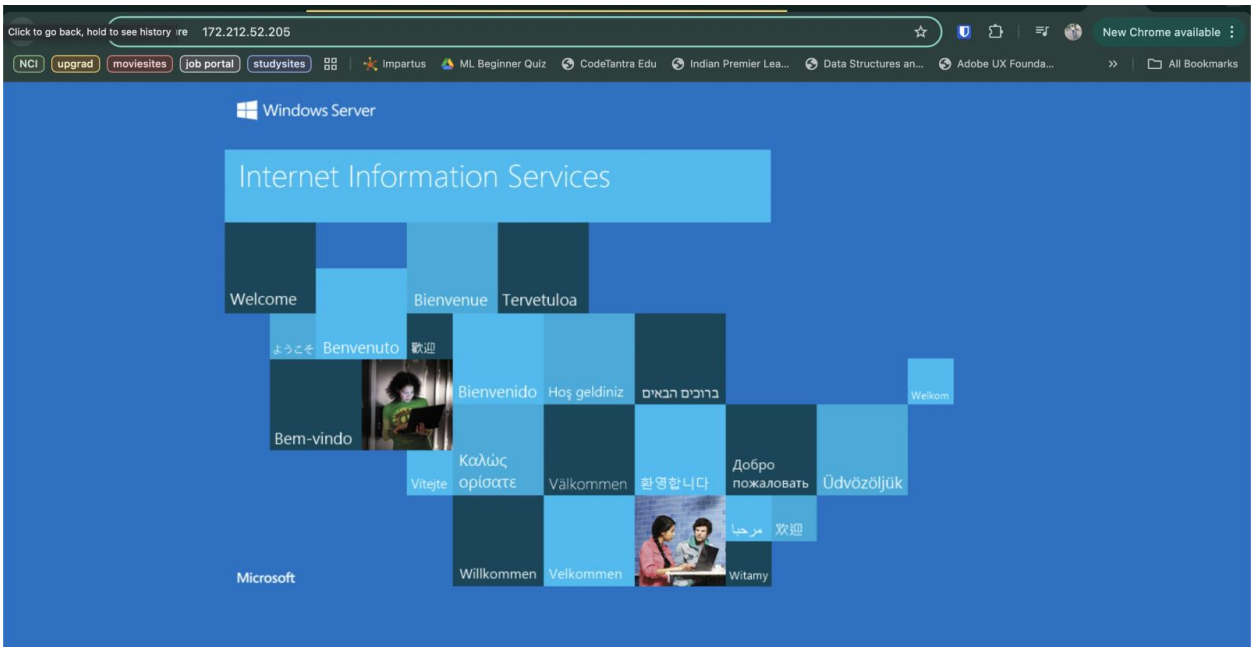

Step 5: Installed IIS web server on both the VM using run command.

1 – installed iis web server using Azure cli on run command option

- Install-WindowsFeature -name Web-Server –IncludeManagementTools
- Restart-Service w3svc

Access it using load balancer ip

AZURE TASK 3

Name: Meenakshi

Batch: 7943

Course Assignment

Task III – implement Secure Connectivity

Step 1: Create Virtual Networks (VNets) in EastUS and EastUS2 Regions

Navigate to the Azure Portal:

a. Go to Azure Portal.

2. **Create the EastUS VNet**:
   a. Go to **"Create a resource"** → **"Networking"** → **"Virtual Network"**.
   b. Specify a name (e.g., EastUS-VNet), region (East US), and an appropriate address space (e.g., 10.1.0.0/16).
   c. Define subnets as necessary (e.g., SubnetA, SubnetB).
3. **Create the EastUS2 VNet**:
   a. Similarly, create another virtual network in the **East US 2** region (e.g., EastUS2-VNet) with a different address space (e.g., 10.2.0.0/16).

Step 2: Set Up the VPN Gateway in Both VNets

For secure communication between the two VNets, we will configure a **Site-to-Site VPN Gateway**.

Create VPN Gateway in EastUS VNet:

1. Go to **"Create a resource"** → **"Networking"** → **"VPN Gateway"**.
2. Enter the required details:
    a. **Name**: EastUS-VPN-Gateway.
    b. **Region**: East US.
    c. **Gateway Type**: VPN.
    d. **VPN Type**: Route-based.
    e. **SKU**: Choose a SKU (e.g., VpnGw1).
    f. **Virtual Network**: Select the EastUS-VNet.
    g. **Public IP Address**: Create a new public IP for this VPN gateway.
3. Click **"Review + Create"** and then **"Create"**.

Create VPN Gateway in EastUS2 VNet:

1. Similarly, go to **"Create a resource"** → **"Networking"** → **"VPN Gateway"**.
2. Enter the required details:
    a. **Name**: EastUS2-VPN-Gateway.
    b. **Region**: East US 2.
    c. **Gateway Type**: VPN.
    d. **VPN Type**: Route-based.
    e. **SKU**: Choose a SKU (e.g., VpnGw1).
    f. **Virtual Network**: Select the EastUS2-VNet.
    g. **Public IP Address**: Create a new public IP for this VPN gateway.
3. Click **"Review + Create"** and then **"Create"**.

Subnet	None
Gateway type	ExpressRoute

Tags

None

Step 3: Configure the VPN Connection

1. **Navigate to the EastUS VNet VPN Gateway**.
    a. Go to the **VPN Gateway** you created in EastUS (e.g., EastUS-VPN-Gateway).
    b. Under **Settings**, select **Connections**.
    c. Click **+ Add** to create a new connection.
    d. Enter the following:
        i. **Name**: EastUS-to-EastUS2-Connection.
        ii. **Connection Type**: Site-to-Site (IPSec).

iii. **Virtual Network Gateway**: Choose the EastUS2-VPN-Gateway.
iv. **Shared Key**: Enter a secure shared key (same shared key on both sides of the connection).

2. **Click OK** to create the connection.
3. Repeat the same steps on the **EastUS2 VPN Gateway**:
    a. Go to the **VPN Gateway** in EastUS2.
    b. Under **Settings**, select **Connections**.
    c. Click **+ Add** to create a new connection.
    d. Enter the same details as before but choose the EastUS-VPN-Gateway for the connection.
    e. Use the same shared key as before.
4. **Validate the connection**:
    a. Once both VPN connections are created, verify that the status is **"Connected"**.

Step 4: Configure Network Security Groups (NSGs)

To restrict unauthorized access between the resources in both VNets, you need to set up **NSGs**.

Create NSG for EastUS VNet:

1. Go to **"Create a resource"** → **"Networking"** → **"Network Security Group"**.
2. Enter the required details:
    a. **Name**: EastUS-NSG.
    b. **Region**: East US.
3. Click **"Review + Create"** and then **"Create"**.

Create NSG for EastUS2 VNet:

1. Similarly, create another **Network Security Group** for EastUS2 VNet.
    a. **Name**: EastUS2-NSG.
    b. **Region**: East US 2.

AZURE TASK 4

Name: Meenakshi

Batch: 7943

Course Assignment

TASK IV – Setup Storage Solutions

1. Set Up Zone-Redundant Storage (ZRS) in EastUS:

Step 1: Create a Storage Account in EastUS with ZRS

1. Go to the **Azure Portal** (https://portal.azure.com).
2. In the left sidebar, select **Storage Accounts**.
3. Click **+ Create**.
4. Under **Subscription** and **Resource Group**, select the appropriate ones.
5. For **Region**, select **East US**.
6. Under **Performance**, select **Standard** or **Premium** based on your needs.
7. Under **Replication**, select **Zone-Redundant Storage (ZRS)**.
8. Fill in the rest of the information, including **Storage account name** (unique name), **Performance**, and **Replication**.
9. Click **Review + Create** and then **Create**.

Step 2: Secure Access to Storage

Option 1: Shared Access Signature (SAS)

1. Go to your **Storage Account**.
2. In the left sidebar, select **Shared access signature** under **Security + Networking**.
3. Set the **Start** and **Expiry** dates, and choose the permissions (read, write, delete, list).
4. Click **Generate SAS token and URL**.
5. Copy the **SAS Token** and **SAS URL**.

Option 2: Access Keys

1. Go to **Access keys** in the left sidebar of your Storage Account.
2. Copy either **key1** or **key2** under **Key1** and **Key2**.
3. Use this key securely in your applications.

Option 3: Role-Based Access Control (RBAC)

1. Go to **Access control (IAM)** in the left sidebar.
2. Click **+ Add** and select **Add role assignment**.
3. Choose the appropriate role (e.g., **Storage Blob Data Contributor**).
4. Under **Select**, choose the user, group, or service principal you want to assign this role to.
5. Click **Save**.

Step 3: Get Access URLs and Keys for Your Application

- **Blob Storage URL**: https://<storage_account_name>.blob.core.windows.net/<container_name>/<blob_name>
- **File Share URL**: \\<storage_account_name>.file.core.windows.net\<file_share_name>

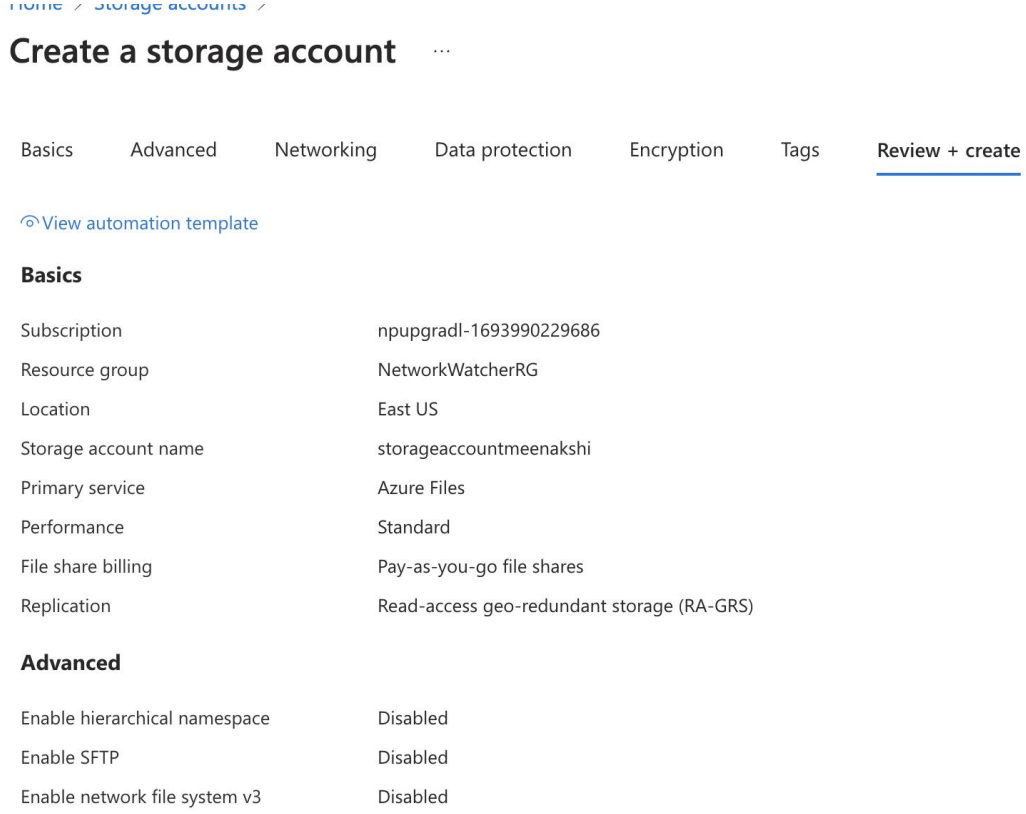

2. Set Up Geo-Redundant Storage (GRS) in EastUS2 (for WS11)

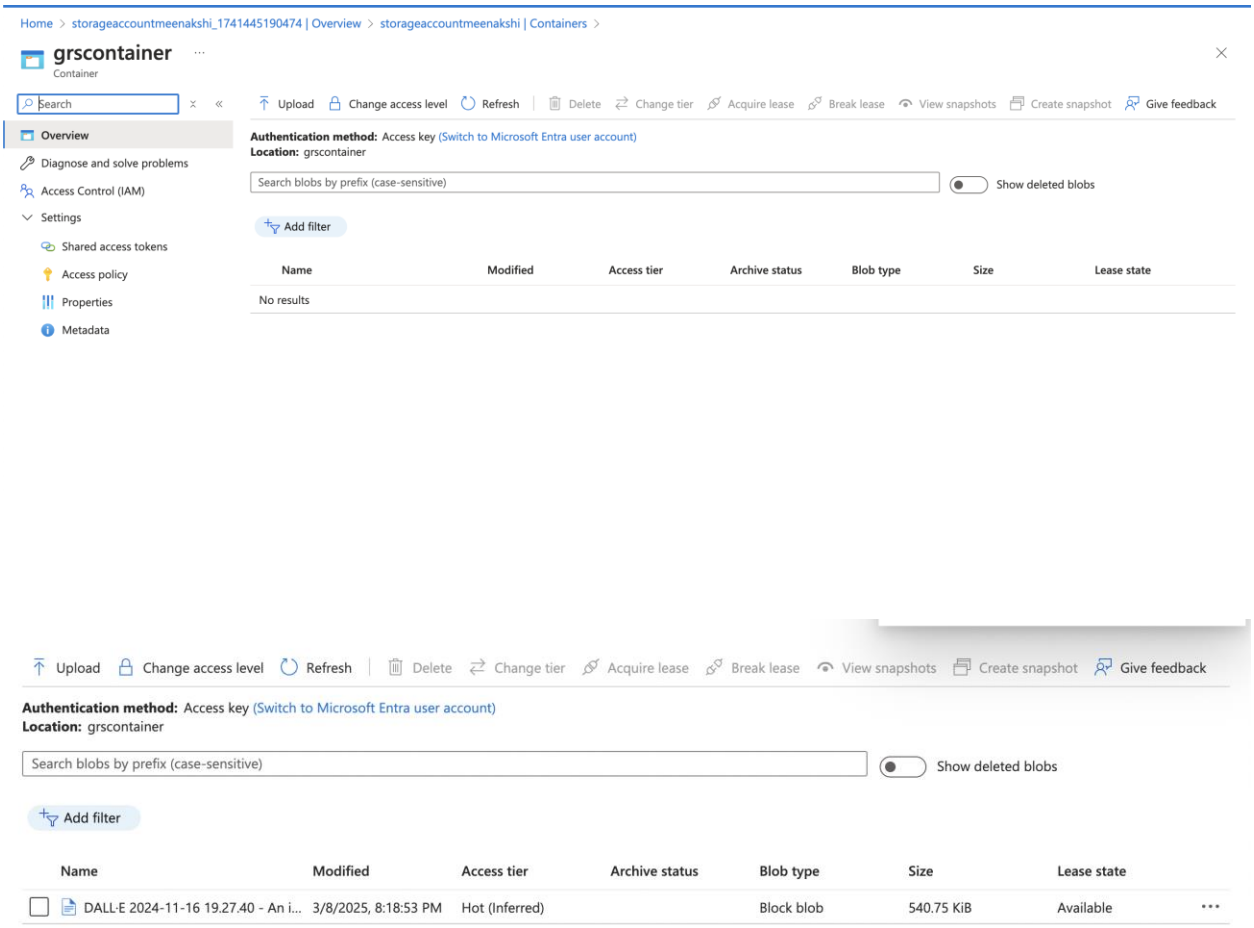

Step 1: Create a Storage Account in EastUS2 with GRS

1. Go to the **Azure Portal**.
2. In the left sidebar, select **Storage Accounts**.
3. Click **+ Create**.
4. Under **Subscription** and **Resource Group**, select the appropriate ones.
5. For **Region**, select **East US 2**.
6. Under **Performance**, select **Standard** or **Premium**.
7. Under **Replication**, select **Geo-Redundant Storage (GRS)**.
8. Fill in the remaining details (e.g., **Storage account name**, **Performance**).
9. Click **Review + Create**, then click **Create**.

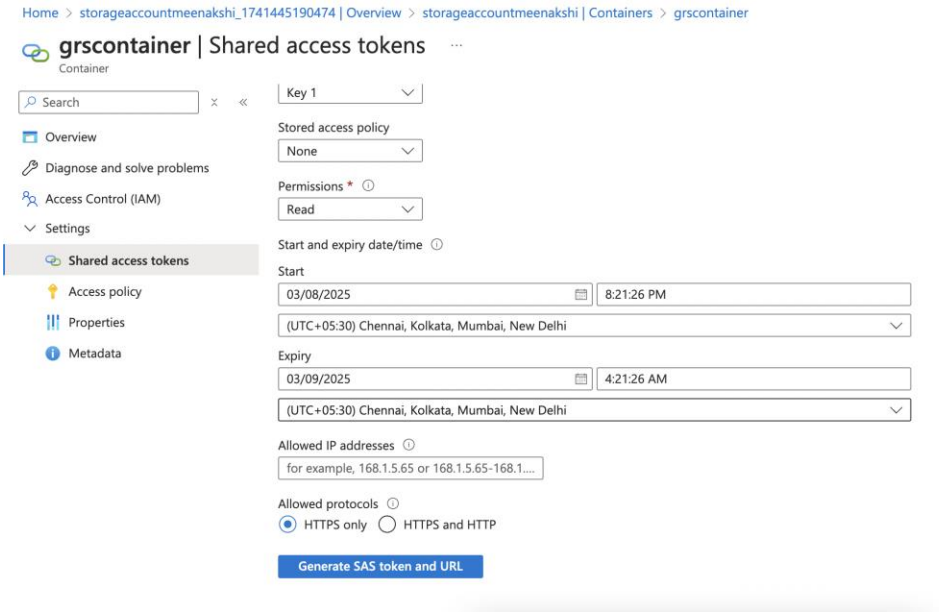

Step 2: Set Up Azure File Share or Blob Storage

1. After the storage account is created, go to **File Shares** or **Containers** in your **Storage Account**.
2. Click **+ File Share** (or **+ Container** for Blob Storage).
3. Name your file share or container and set the desired quota and permissions.
4. Click **Create**.
