Wednesday 20th August 2025

2:00pm – 4:00pm

Data Governance, Compliance and Ethics

Jaswinder Singh

Vikas Sahni

Instructions: Answer ALL questions

Duration of exam: 2 Hours

Attachments: None

1. **Case-Based Question (40 marks):**

   Case Scenario:
   MobiFin Technology Ltd., an Irish fintech company, recently launched a mobile banking app that collects personal data, including biometric and transaction data. After a rapid rollout, the company discovers that several modules did not undergo Data Protection Impact Assessments (DPIAs), and customer consent forms were overly broad and non-specific. The board brought in an external data governance consultant who raised concerns that the company does not have a CDO, and that internal risk management practices are not sufficiently aligned with GDPR requirements.

   Questions:
   As an applicant for the CDO position, write a proposal that addresses the following:

   a) A critical evaluation of how GDPR principles should reshape their internal risk management strategy.
   b) What roles and responsibilities within the organisation must be strengthened to address these gaps?
   c) How can GDPR-aligned practices be embedded into the development lifecycle of future digital products?
   d) What is your understanding of the role of the CDO?

2. Critically analyse the role of data governance frameworks such as COBIT or ISO/IEC 38500 in ensuring compliance with legal and regulatory requirements in a multinational organisation.

   (30 marks)

3. Analyse how ethical principles evolve in response to advancements in ICT and AI.

   (30 marks)
