Research into Dogecoin

Dogecoin is a peer to peer digital currency. It was founded by Billy Markus and Jackson Palmer in 2013. Doge coin was created to show that anyone can copy the bitcoin code to start their own coin, only a couple of code changes can lead to their own created coin. Dogecoin is just like a social experience. Currently total 151.22 billion DOGE is circulating in the market, and its total market value is around $39.39 billion. Dogecoin coin was initially created to make fun of bitcoin but later it had set the high value and was also adopted by Tesla, basketball companies and other big companies as a method of payment.

Dogecoin has set its market value. It is an alt coin with a large userbase, and is traded against both fiat currencies and other cryptocurrencies on several cryptocurrencies exchanges.
It was also used in a property sale, and also used in the gambling industries.

In the market place, the turning point for dogecoin was in 2021, when it reached its record high market capitalization of about USD 88.8 billion. Since then, its market has gone down and become more unstable, but as it's also a popular cryptocurrency in the world which makes it trade actively in the market and has a large number of coins in circulation.

Research into World Coin

Worldcoin was launched in 2023 by Sam Altman (CEO of OpenAI). Uses an unique method which is a biometric system called World ID that verifies users through irish scans using a device called an Orb. On being verified, users receive a small amount of Worldcoin, allowing global participation in crypto without prior investment.

Its main goal is to solve two major problems which are digital identity verification and global economic inclusion. In the market approx $2.18 billion WLD is circulating with the market capitalization of around $2.79 billion USD and the current price is about $1.28 WLD.
